CONTRACTOR – BD NUCLEAR

DIAMOND WIRE CUTTING AT DOUNREAY FAST REACTOR

To whom it may concern.

BD Nuclear have successfully provided Breeder Project with an innovative solution for removing a 300 mm section of a stainless steel Gamma Gate, whilst remaining attached to a Flask.

The work-pack received from BD Nuclear addressed critical interactions and work-place risks to the satisfaction of the Permit Issuing Authority, with minimal re-iteration.

The work has been carried out and completed with excellent standards of safety. During the work activity, the project was subject to an un-announced visit from an Industry Regulator. The Inspector whilst taking a keen interest, was content with the BD Nuclear safety controls in place.

BD Nuclear's expertise and experience in diamond wire cutting in the nuclear field was evident from tender submission, through to work completion.
